

IDS Unveils Capsula by Brokis – A Fusion of Organic Form and Innovative Lighting

By **altaf** - March 5, 2025

New Delhi, March 05, 2025: Innovative Design Studio (IDS), renowned for bringing cutting-edge lighting solutions to the Indian market, introduces the 'Capsula' collection, a captivating fusion of advanced craftsmanship and modern aesthetics.

Capsula designed by Lucie Koldova, takes cues from nature resembling the layered structure of plant cells. The collection features an inner tubular light source, delicately enclosed within two elliptical glass shells, creating a striking interplay of transparency, light, and color. The result is a luminous effect that appears weightless, yet profoundly sculptural—an artistic statement as much as a functional lighting solution.

Handcrafted in premium handblown glass, the collection reflects Brokis' dedication to traditional glassmaking techniques while embracing modern technology. The collection is available in a range of sophisticated colorways, allowing for versatile applications in residential and commercial spaces. Whether installed as an individual pendant or arranged in dynamic clusters, transforms interiors with its ethereal glow and captivating design.

The collection stands as a testament to IDS' commitment to craftsmanship and innovation, elevating the art of lighting.
